

SNM Accounts Management System

Introduction to Accounting

Basic accounting rules group all finance related things into five basic functions.

Assets – things the business own.

Liabilities – things the business owe. These are claims on the business.

Equity – things that represent the business overall net worth. These are owned by the business owners.

Income – things that increase the value of the business net worth.

Expenses – things that decrease the value of the business net worth.

Assets, Liabilities and Equity accounts are used to track changes in value of the business. They are called **balance sheet accounts**.

Income and Expense accounts are used to increase or decrease the value of the business. Income minus total expense for a time period is referred to as the net income. This net income is added to the balance sheet as **retained earnings**. Retained earnings is an Equity type account.

The Accounting Equation

The relationship between the five basic accounts is expressed mathematically in the **accounting equation**.

$$\text{Assets} - \text{Liabilities} = \text{Equity} + (\text{Income} - \text{Expenses})$$

This equation must always be balanced.

Rearranging the accounting equation gives:

$$\text{Assets} + \text{Expenses} = \text{Equity} + \text{Liabilities}$$

Double Entry Accounting

Double entry accounting is a method of record-keeping that lets you track just what goes. This means that universally, *value* is never gained nor lost – an equal amount is added to one account and subtracted from another.

The accounting equation is the very heart of the double entry accounting system. For every change in one account in the accounting equation, there must be a balancing change in another account. This is called **Balance**.

Accounting Terminology

In accounting the terms **debit** and **credit** are generally used to describe whether an account is increased or decreased.

account. The movement of *value* from one account to another is called a *transfer*.

Value always flows from the **credit side** of a transaction to the **debit side**.

From the accounting equation it is convenient by convention to group transactions into two categories:

Debit accounts: These are *assets* and *expenses* accounts.

Credit accounts: These are liabilities, equity and income accounts.

Consequently, we consider the following definitions:

A debit is an accounting entry that results in either an increase in a debit account or a decrease in a credit account.

A credit is an accounting entry that results in either an increase in a credit account or a decrease in a debit account.

The main rule of accounting is:

For every transaction, **total debits** must equal **total credits**.

Accounting Data Concepts

For purpose of modelling, accounting data is divided into four levels of organization: **primary accounts**, **holder accounts** and **transactions**. In order of complexity – a primary account contains many secondary accounts, a secondary account contains many holder accounts, and a holder account contains many transactions.

Primary Accounts – These are the main account types used for keeping track of financial data.

Secondary Accounts – These are accounts created under the primary accounts for more detailed financial statements.

Holder Accounts – are named sub-accounts created under the secondary accounts for specific financial objects.

Transactions – represents the movement of value from one holder account to another, involving at least two holder accounts.

Overview of Bauta Management Accounts System

The SNM Accounts Management System built for Bauta consists of eleven primary accounts:

- Non-current Assets
- Current Assets
- Equity
- Non-current Liabilities
- Current Liabilities
- Direct Income
- Other Income
- Direct Costs
- Operating Expenses
- Tax Expenses

Tax Expenses
Interest Expenses

Non-current Assets

Non-current assets are assets for long-term use by the business and are expected to generate income.

Bauta Management Accounts non-current assets consists of four secondary accounts:

Property, Plant & Equipment: are tangible assets that the company owns and cannot be easily converted to cash. Property, plant & equipment are expected to be held for long-term use. Examples of accounts such as land & building, machinery, vehicles, furniture, fittings, etc.

Intangible Assets: are non-physical assets that have value, like intellectual property, reputation. Considering the nature of intangible assets, it is easily not convertible to cash. Examples of accounts such as computer software, patents, trademarks, intellectual property, etc.

Deferred Tax Asset: refers to the difference between the taxes the company has paid in its tax statement and the taxes it actually pays to the government. Deferred tax assets are expected to contain holder accounts such as net operating loss, tax overpayment, etc.

Other Non-current Assets: are assets that the company owns and expects to be used for more than one year, but are not classified as tangible or financial assets. They include long-term prepaid charges, or certain types of prepaid expenses. These assets are not easily convertible to cash. Examples of accounts such as long-term prepaid insurance, long-term prepaid rent, etc.

Current Assets

Current assets are assets that are expected to be converted into cash or used up within one year of the business.

Bauta Management Accounts current assets consist of four secondary accounts:

Cash & Bank Balances: Cash and bank balances refer to the amount of cash and bank balances in the company's possession, both in physical cash and bank accounts. The Cash & Bank Balances account is a system holder account, namely, *Petty Cash*. Cash & bank balances are expected to be held for short-term use. Examples of accounts such as savings accounts, current accounts, etc.

Inventory: Inventory refers to the goods or products the company holds for sale in its operations. Inventory is expected to comprise of holder accounts describing the types of goods or products held.

Accounts Receivable: are monies owed to the company by its customers who have been delivered but not yet paid for. Accounts receivable is expected to be held for short-term use. Examples of accounts such as the names of customers of the company.

Other Current Assets: are assets that a company owns and uses to generate income within one year.

Other Current Assets: are assets that a company owns and uses to get converted into cash within one business cycle. Other current assets include accounts such as prepaid expenses, etc.

Equity

Equity refers to the company's book value, which is the difference between assets and liabilities. Equity refers to the ownership interest in the company.

Bautista Management Accounts equity consists of four secondary accounts:

Stated Capital: is the amount of capital that the company has stated on its balance sheet. Stated capital is expected to comprise of holder account such as common stock.

Shareholders accounts: is a record of the net balance of funds introduced by a shareholder. The Shareholders Account contains a system holder account.

Retained Earnings: are the accumulated profits that the company has earned over business over time. Retained earnings account is system calculated.

Dividend Paid: is a portion of the company's profit that the company distributes to its shareholders. Dividend paid is expected to comprise of a holder account such as a dividend payable.

Non-Current Liabilities

Non-current liabilities are long term obligations that the company owes and are due longer than one accounting period.

Bautista Management Accounts non-current liabilities consists of five secondary accounts:

Accumulated Depreciation: is the total depreciation expense that has been recorded over the life of an asset. Accumulated Depreciation is expected to comprise of a contra asset account for the company's tangible assets, such as Staff vehicles, furniture, fittings and hardware.

Provision for Amortization: refers to monies set aside for depreciation of intangible assets. Amortization is expected to comprise of a contra asset account in the name of the assets, such as computer software, goodwill, brand name, etc.

Long-term Debt: refers to the financial obligations that the company owes over a period of time longer than one accounting year. Long term debt is expected to comprise of a liability account.

Deferred Tax Liability: refers to taxes the company will owe in the future based on the difference between its accounting and tax records. Deferred tax liability is expected to comprise of a liability account such as tax underpayment and installment sales.

Other Non-Current Liabilities: refer to long term obligations that the company owes and settle over a period of time longer than one operational year. Other non-current liabilities are expected to comprise of holder accounts such as Debentures.

Current Liabilities

Current liabilities are financial obligations that the company is expected to settle within one year.

Bauta Management Accounts current liabilities consist of three secondary accounts.

Accounts Payable: is the amount of money that the company owes to suppliers that have been received and not yet paid for. Accounts payable is expected to contain the accounts of suppliers of Bauta Logistics.

Tax Payable: is the amount of money the company owes to the government. It is expected to comprise holder account such as excise duties, custom duties, and other taxes.

Other Current Liabilities: are the financial obligations that the company expects to settle within the operational period. Other current liabilities are expected to comprise accounts payable, accrued liabilities, and water bills outstanding.

Direct Income

Direct income refers to revenue generated from the core activities of the business.

Bauta Management Accounts direct income consists of one secondary account.

Sales: is the amount of money earned by the company through its core activities. It is expected to contain holder accounts which represent the various products and services.

Other income

Other income is revenue that is not derived from the core activities of the business.

Bauta Management Accounts other income consists of two secondary accounts.

Interest Income: refers to the money the company earns from the interest on its other interest-bearing assets. Interest income is expected to comprise interest on bank deposits and investments.

Other Income: is money the company earns that is not derived from its core activities. Other income may include income from discounts received, royalties, and other non-core activities.

Direct Cost

Direct costs are expenses that are directly associated with the production of a product or service.

Bauta Management Accounts direct cost consists of one secondary account.

Cost of Sales: refers to the direct expenses incurred in producing or acquiring the goods and services that the company sells. The Cost of Sales account is expected to contain the various products and services of the business.

Operating Expenses

Operating expenses are the costs that the company incurs in its day-to-day operations.

Bauta Management Accounts operating expenses consist of seven secondary accounts.

Bautam Management Accounts other income consists of seven secondary accounts:

Staff Cost: refers to the expenses associated with employing and company. Staff cost is expected to comprise a holder account such as salaries.

Rental Cost: refers to the expenses incurred for renting a space for a business. Rental cost is expected to comprise a holder account such as warehousing facilities and office space.

Selling, General & Admin Expenses: are costs incurred by the company in the production of goods and services. Selling, general & admin expenses such as toiletries, travels, meals and management bonuses.

Marketing & Advertisement cost: are expenses associated with promoting the company. Marketing & advertisement cost are expected to comprise a holder account such as billboards.

Taxes & Levies: refer to the financial obligations that a company has to the tax authorities. Taxes & levies expenses are expected to comprise a holder account such as income tax.

Depreciation Expenses: refers to the allocation of cost of a tangible asset over its useful life. Depreciation expenses are expected to comprise a holder account such as motor vehicles and machinery.

Other Operating Expenses: refers to expenses that are not classified under the above categories. Other operating expenses are expected to comprise a holder account such as workshops, vacations and other miscellaneous expenses.

Tax Expenses

Tax expenses refer to the amount of money the company pays to the government.

Bautam Management Accounts tax expense consists of two secondary accounts:

Corporate tax: refers to tax expense the company pays on its profits or losses.

Deferred tax: refers to the recognition and recording of future tax liabilities. Deferred tax expenses are expected to comprise a holder account such as deferred tax on assets.

Interest Expenses

Interest expense is the cost incurred by the company for borrowed funds.

Bautam Management Accounts tax expense account consists of one secondary account:

Interest Expense: is the cost incurred by the company for borrowed funds. Interest expense is expected to comprise of a holder account such as interest on loans.

1. General

1.1 SNM Accounts Management System

SNM Accounts Management System is an easy-to-use Microsoft Excel-based application layers which can easily be customized to the business operations and

SNM Accounts Management System has the essential features of the usual accounting system which incorporates operations-specific accounts and integrates them with the inventory

1.2 Requirements

The essential requirement is a Windows 10 or better (64 or 32 bits) Microsoft Office 2010 or better (64 or 32 bits).

SNM Accounts Management System is essentially a Microsoft Excel (macro-enabled) with a Microsoft Excel database file.

1.3 The Application Structure

On the desktop, double-click the *SNM Accounts Management System file icon* to launch the *System* as a Microsoft Excel application.

Figure 1.1 SNM Accounts Management System Model Page

Launching the *SNM Accounts Management System* also introduces the *SNM* task groups, namely, *SNM Run* and *SNM Dashboard*. The *SNM Run* group contains the *Accounts Manager*, *Save Report*, and *View Header* controls. The *SNM Dashboard* group contains the *View Dashboard* control button, the *Line* and *Column* chart type buttons, and the *Refresh* and *Previous month* buttons.

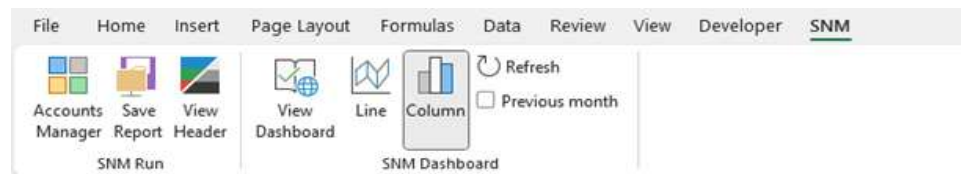

Figure 1.2 The SNM Tab

The *SNM Accounts Management System* comes with the following basic application structure:

Application

Clicking the *Application worksheet tab* displays the *SNM Accounts Management System* main application window.

You can also access the *Main Application page* window by clicking the *Accounts Manager* button in the *SNM Run* group.

You can also access the *Main Application page* window by clicking the *Accounts* under the *SNM tab* on the Ribbon.

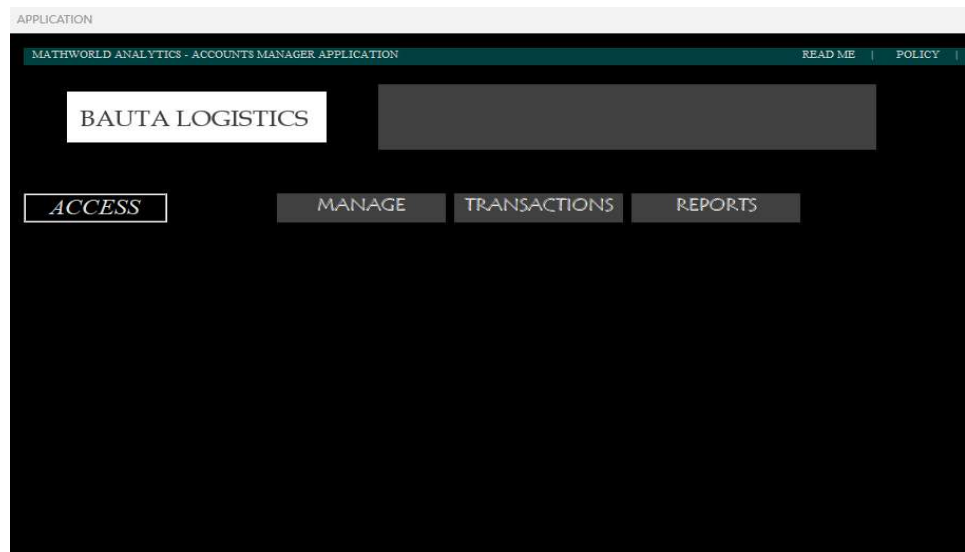

Figure 1.3 The Main Application Window

If you do not see the above window, then macros are not enabled in Microsoft click

FILE:Options : Trust Center : Trust Center Settings : Macro

Select enable all macros and then click *OK*. Close the application software file a

Model

Figure 1.13 The Inventory Report Page

Dashboard

Clicking the *Dashboard worksheet tab* selects and opens the *Dashboard worksheet*

You can also access the *Dashboard worksheet page* by clicking the *View Dashboard*

under the *SNM tab* on the Ribbon.

The *Dashboard page* shows six-month trend analytics for a number of selected Operating Expenses, Net Profit, Cash & Bank, Inventories, Accounts Payable, Ac

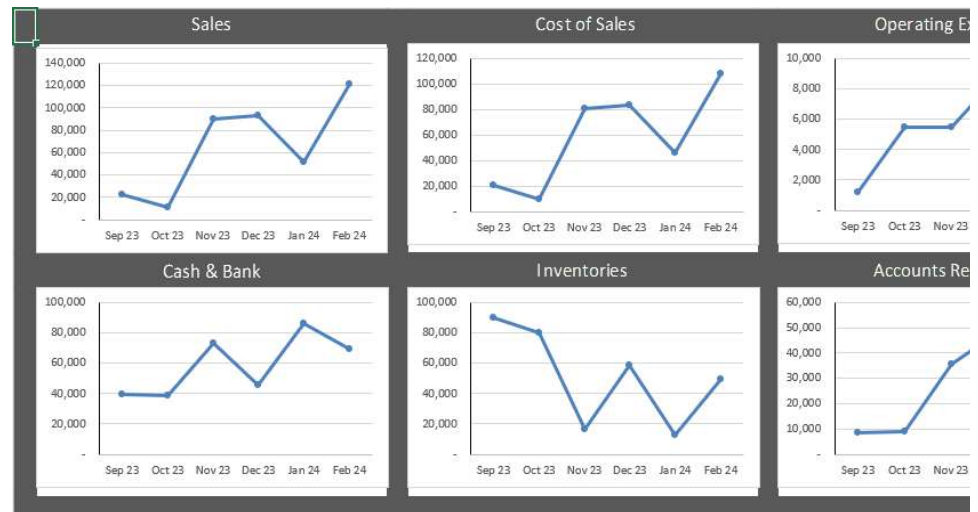

Figure 1.13 The Dashboard Page

1.4 The Main Application Window

The *Main Application Window* of the *SNM Accounts Management System* is a graphical user interface that allows users to communicate with the entire application system.

There are two methods for launching the *Main Application Window* of the *SNM Accounts Management System*.

I. Using the *SNM tab* on the ribbon:

- Click the *SNM tab*. This will display the *SNM Add-ins group*.
- Click the *Accounts Manager control* under the *SNM Add-ins group*. This will open the *Main Application Window*.

II. Using the *Application worksheet tab*:

- Click the *Application worksheet tab*. This will display the *Main Application Window*.

The key features (or controls) on the *Main page* are: *READ ME*, *ACCESS*, *MANAGE*, *TRANSACTIONS*, *REPORTS*, *Inner Close*, and *Outer Close*.

- Clicking the *READ ME control button* will return the user to the *ReadMe* page.
- Clicking the *ACCESS control button* will open the *System Access form window*.
- Clicking the *MANAGE control button* when enabled will open the *Manage System* page.
- Clicking the *TRANSACTIONS control button* when enabled will open the *Accounting Transactions* page.
- Clicking the *REPORTS control button* when enabled will open the *Accounting Reports* page.
- Clicking the *Inner Close button* will close the main application page and return the user to the *Home* page without logging out the user.
- Clicking the *Outer Close button* will close the main application page, return the user to the *Home* page, and log out the user.

2. Navigating the ReadMe Worksheet

The *ReadMe worksheet page* primarily consists of two control buttons: *Introduction to Accounting* is also a *Scroll Column label control*.

Figure 2.1 The Read Me Control Buttons

2.1 Introduction to Accounting

Clicking the *Introduction to Accounting button* returns the user to the first page of the *ReadMe worksheet page*.

2.2 User Manual

Clicking the *User Manual control button* returns the user to the *Cover page* of the *worksheet page*.

Clicking the *Contents control button* takes the user to the *Contents page* of the *worksheet page*.

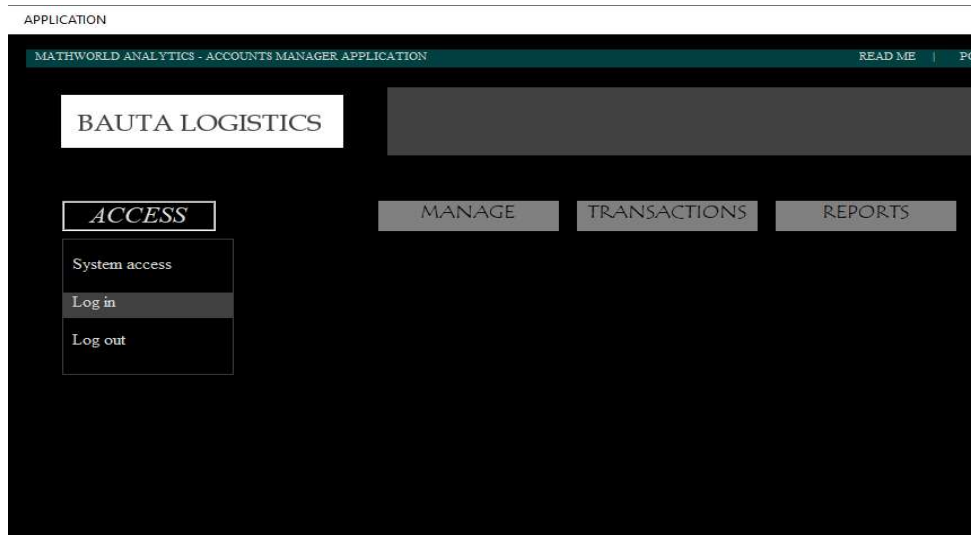

Each section or subsection outline under the *Contents page* of the *User Manual* enables the user to access the relevant section of the *User Manual* when clicked.

2.3 Scroll Column

The *Scroll Column* indicates to the user the application of the *arrow keys* for navigation. The *top* and *left arrow keys* enable the user to scroll to the top of the *ReadMe worksheet page*.

3. Access

Clicking the *ACCESS control button* toggles between opening and closing the *Access frame* which contains the *System access*, the *Log in*, and the *Log out* control labels.

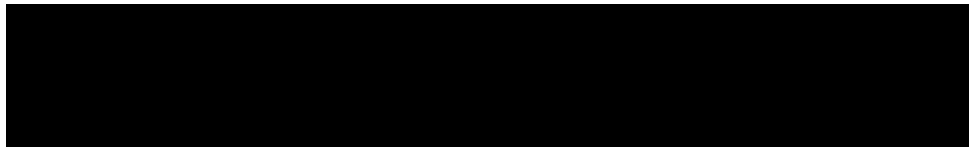

Figure 3.1 The Access Dropdown Frame

- <> Clicking the *System access control label* displays the *System Access form* which allows users to manage and control the software application system. Refer to the *System User Manual* for more information on system management and control.
- <> Clicking the *Log in control label* displays the *Log in form window* which enables users to perform activities such as log-in, sign-up, and change password.

3.1 Log In

The *MANAGE*, *TRANSACTIONS* and *REPORTS control labels* on the main application window require users to login to enable these control labels for the performance of specific activities.

Clicking the *Log in control label* under the *ACCESS control button* displays the *Sign In form window*, which is the default page of the *Sign In form window*.

Figure 3.2 The Sign in Form Window

- To log in, perform the following steps:
 1. Enter the appropriate username. This will display the *User Level* as either *USER* or *SUPER USER*.
 2. Enter the correct password.
 3. Click *Login*. If successful, this will enable the *MANAGE*, *TRANSACTIONS* and *REPORTS control labels*.

3.2 Sign Up

Clicking the *Click here to sign up label control* on the *Sign in page* opens the *Sign*

The screenshot shows a web interface titled "Sign In". Below the title is a blue left-pointing arrow. The main content area is a form titled "Sign up". The form has two sections. The first section contains four fields: "User ID" (a dropdown menu), "Access code" (a text input), "Level" (a text input), and "Name" (a text input). The second section contains three fields: "Username" (a text input), "New password" (a text input), and "Confirm password" (a text input).

Figure 3.3 The *Sign up* page of the *Sign in Form Window*

- To sign up, perform the following steps:
 1. Select the user ID.
 2. Enter the appropriate access code. Contact your system administrator
 3. Click *Search* to display and confirm your assigned level and your name
 4. Choose and enter your desired username. Notice that your desired us to already entered usernames in the system.
 5. Enter a password and confirm the password.
 6. Click *Submit*. If succesful, this will sign you up as a user of the applicat
- To go back to the *Sign in page*, click the *left arrow icon* at the top left corner (

3.3 Change Password

Clicking the *Click here to sign up label control* on the *Sign in page* opens the *Sign*

The screenshot shows a web interface titled "Sign In". Below the title is a blue left-pointing arrow. The main content area is a form titled "Change password". The form has four fields: "Username" (a dropdown menu), "Level" (a text input), "Current password" (a text input), and "New password" (a text input).

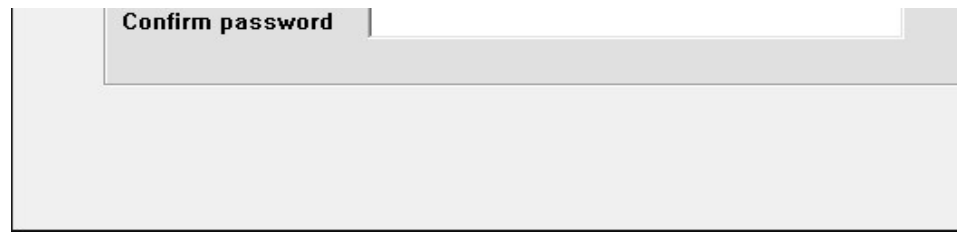

Figure 3.4 The *Change password* page of the *Sign in Form Window*

- To change your password, perform the following steps:
 1. Select the your username. This will display your assigned user level in
 2. Enter your current password.
 3. Enter your new password and confirm the password.
 4. Click *Submit*. If successful, this will change your password in the system

o To go back to the *Sign in* page, click the *left arrow icon* at the top left corner

3.4 Log out

Clicking the *Log out control label* under the *ACCESS control button* on the main *confirmation prompt window*.

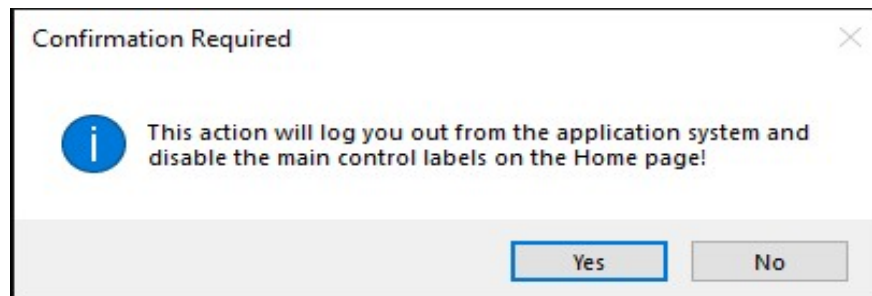

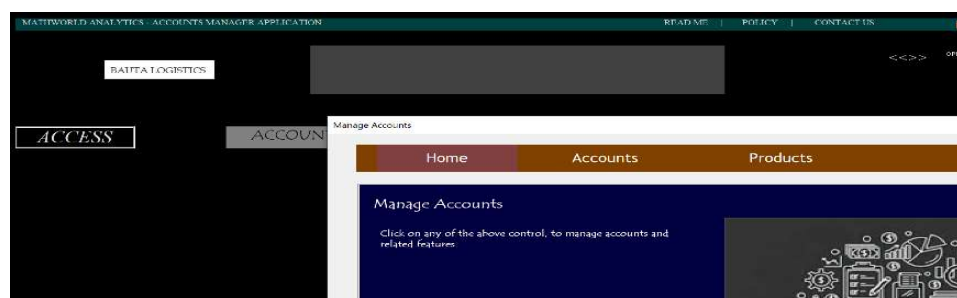

Figure 3.5 The *Log out Confirmation Required* prompt window

- To log out, perform the following steps:
 1. Click *Yes*. If successful, this will disable the *MANAGE, TRANSACTIONS,* on the main application page.

4. Manage

The *Manage Accounts* form window is displayed when the *MANAGE control* is clicked. It consists of three tabs: *Home, Accounts* and *Products*.

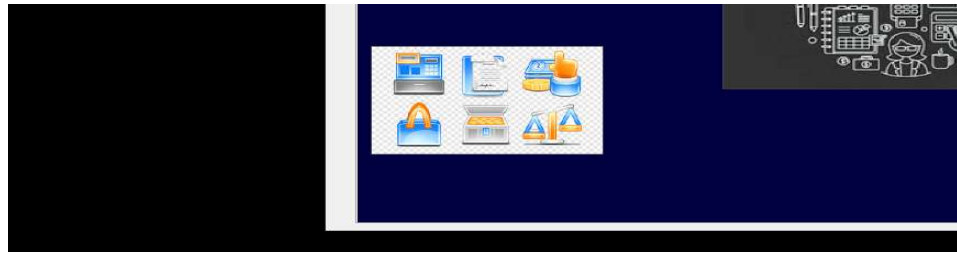

Figure 4.1 Manage Accounts Form Window

4.1 Home

The *Home page* is the default page of the *Manage Accounts form window*. Click the *Manage Accounts form window*.

4.2 Accounts

Clicking the *Accounts tab* opens the *Accounts form* of the *Manage Accounts form*.

Figure 4.2 Accounts Form

The *Accounts form* displays the following controls and buttons:

- **Account Types:** The *Account Types frame* contains the *Select Primary Account* *Account combobox*.
- **Select Primary Account:** The *Select Primary Account listbox* enables the user to select from a list.
- **Select Secondary Account:** The *Select Secondary Account combobox* enables the user to select a secondary account from a list which corresponds to the selected primary account.
- **Account Code:** The *Account Code combobox* which enables the user to enter a code which corresponds to the selected secondary account.
- **Account Name:** The *Account Name textbox* enables the user to enter the description which corresponds to the displayed account code.

correspond to the displayed account code.

- **Description:** The *Description* textbox enables the user to enter some details
- **New:** The *New* button activates the *Save* button when clicked.
- **Save:** The *Save* button enables the user to save the created holder account i disabled by default.
- **Update:** The *Update* button enables the user to make changes to the already *Update* button is disabled by default.

☐ To create a new holder account, perform the following steps:

1. Click the *New* button to enabled the *Save* button. Notice that the screen clicked.
2. Select a primary account using the *Select Primary Account* listbox.
3. Select a secondary account using the *Select Secondary Account* combobox the account code automatically.
4. Enter the account name in the *Account Name* textbox.
5. Enter the description in the *Description* textbox.
6. Click the *Save* button.

☐ To update an existing holder account, perform the following steps:

1. Select a primary account using the *Select Primary Account* listbox.
2. Select a secondary account using the *Select Secondary Account* combobox
3. Select an account code. This action automatically displays the account n
4. Make the necessary changes to the account name and/or description.
5. Click the *Update* button.

NOTE: The *Accounts* form window cannot perform operations involving *inventory*

4.3 Products

Clicking the *Products* tab opens the *Product* form window.

Manage Accounts

Figure 4.3 Products Form Window

The *Products form window* displays the following controls and buttons:

- **Product Details:** The Product Details frame contains the *Product Code*, *Product Name*, *Batch Code*, and *Profit Margin* controls.
- **Product Code:** The Product Code textbox comes as a combo box which enables the user to select a product code from a dropdown list.
- **Product Name:** The Product Name textbox enables the user to enter the name of the product.
- **Batch Code:** The Batch Code textbox enables the user to enter the batch code of the product.
- **Profit Margin:** The Profit Margin textbox enables the user to enter the profit margin as a percentage of the selling price of the product.
- **For Inventory:** The For Inventory frame contains an *Account Description* textbox which enables the user to enter a description for the associated inventory line item.
- **For Cost of Sales:** For *Cost of Sales* frame contains an *Account Description* textbox which enables the user to enter a description for the associated cost of sales line item.
- **For Sales:** For *Sales* frame contains an *Account Description* textbox which enables the user to enter a description for the associated sales line item.
- **New:** The New button generates a product code and activates the *Save button*.
- **Save:** The Save button enables the user to save the displayed product details. The *Save button* is disabled by default.
- **Update:** The *Update button* enables the user to make changes with respect to the product details in the database. Notice that the *Update button* is disabled by default.

❑ To create a new product and corresponding accounts in the database, perform the following steps:

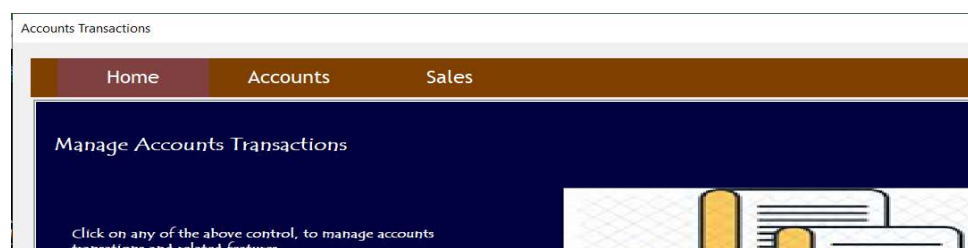

1. Click the *New* button to generate a product code and enable the *Save button*.
2. Enter the product name.
3. Enter the batch code for the product.
4. Enter an *account* description for inventory.
5. Enter an account description for cost of sales.
6. Enter an account description for sales.
7. Click the *Save* button.

❑ To update the details of a particular product, perform the following steps:

1. Select the product code from the *Product Code* dropdown list.

5. Transactions

The **Accounts Transactions** form window is displayed when the *Transactions* control is clicked. The *Accounts Transactions* form window consists of three tabs: *Home*, *Accounts* and *Sales*.

- **Transaction Information:** The *Transaction Information* frame contains the following controls and buttons:
 - o **Date:** The *Date* textbox comes with a *date picker* control which enables the user to select a date.

date.

- **Number:** The *Number textbox* displays the number code of the transaction.
- **Reconciled:** The *Reconciled textbox* enables the user to indicate whether the transaction is reconciled.

- **Description:** The *Description frame* contains a textbox which enables the user to enter a description of the transaction.

- **Transfer Amount:** The *Transfer Amount frame* contains a textbox which enables the user to enter the amount of the transaction.

- **Debit:** The *Debit frame* contains the *Primary acc.*, *Secondary acc.* and *Holder acc.* textboxes.

- **Primary acc.:** The *Primary acc. combobox* enables the user to select an account from a dropdown list.
- **Secondary acc.:** The *Secondary acc. combobox* enables the user to select an account from a dropdown list.
- **Holder acc.:** The *Holder acc. combobox* enables the user to select the holder from a dropdown list.
- **Balance:** The *Balance textbox* displays the current balance of the selected account.

- **Credit:** The *Credit frame* contains the *Primary acc.*, *Secondary acc.*, and *Holder acc.* textboxes.

- **Primary acc.:** The *Primary acc. combobox* enables the user to select an account from a dropdown list.
- **Secondary acc.:** The *Secondary acc. combobox* enables the user to select an account from a dropdown list.
- **Holder acc.:** The *Holder acc. combobox* enables the user to select the holder from a dropdown list.
- **Balance:** The *Balance textbox* displays the current balance of the selected account.

- **Navigation group:** The *navigation group of controls* consists of the *Date Search checkbox*, the *Previous navigation button*, the *Position label control*, the *Number label control*, the *Next navigation button*, and the *Last navigation button*.

- **Date Search:** The *Date Search checkbox* enables the user to navigate to a particular date. The *Date Search* is relevant only for actions related to the *Navigation group of controls*.
- **First Navigation Button:** The *first navigation button* enables the user to navigate to the first transaction in the database. If the *Date Search* is checked, this navigates the user to the first transaction corresponding to the displayed date.
- **Previous Navigation Button:** The *previous navigation button* enables the user to navigate to the previous transaction in the database relative to the displayed transaction.
- **Position label control:** The *position label control* displays the position of the selected transaction in the list of transactions.
- **Number label control:** The *number label control* displays the total number of transactions.
- **Next Navigation Button:** The *next navigation button* enables the user to navigate to the next transaction in the database relative to the displayed transaction.
- **Last Navigation Button:** The *last navigation button* enables the user to navigate to the last transaction in the database. If the *Date Search* is checked, this navigates the user to the last transaction corresponding to the displayed date.

corresponding to the displayed date.

- **Transaction Register:** The transaction register shows a list of ten transactions.
 - **Num:** Shows the positions of relevant transaction in the database. Enables the user to display the relevant transaction on the screen.
 - **Date:** Shows the dates of relevant transactions.
 - **Description:** Shows the description of relevant transactions.
 - **Amount:** Shows the transfer amounts of relevant transactions.
 - **Primary acc.:** The first shows the primary accounts on the debit side and the second shows the primary accounts on the credit side of relevant transactions.
 - **Secondary acc.:** The first shows the secondary accounts on the debit side and the second shows the secondary accounts on the credit side of relevant transactions.
 - **Holder acc.:** The first shows the holder accounts on the debit side, and the second shows the holder accounts on the credit side of relevant transactions.
 - **The Scroll Bar:** The *scroll bar* enables the user to scroll through the transactions in the register.
 - **The Bar Button:** The *bar button* enables the user to return the scroll bar to the first ten transactions.
- **Command group:** The command *group of controls* consists of the *Duplicate previous* button, the *Submit* button, the *Update* button, the *Delete* button, and the *Use Splits* button.
 - **Duplicate previous:** The *Duplicate previous checkbox* enables the user to duplicate the transaction based on the previously displayed one.
 - **New:** The *New button* enables the *Submit* button when clicked.
 - **Submit:** The *Submit button* enables the user to save new transactions.
 - **Update:** The *Update button* enables the user to save changes made to an existing transaction.
 - **Delete:** The *Delete button* enables the user to delete a transaction from the register.
 - **Use Splits:** The *Use Splits button* enables the user to open the *Splits* dialog box.

❑ To create a transaction (between two accounts), perform the following steps:

1. Click the *New* button to enable the *Submit button*. This action will also generate a transaction number and set the *Reconciled field* to “n”.
2. Use the *Date* field to select the appropriate transaction date if not the current date. This action will also generate a transaction number and set the *Reconciled field* to “n”.
3. Enter the description and a required transfer amount.
4. Make the debit and credit entries.
5. Click the *Submit button*.

❑ To update an existing transaction, perform the following steps:

1. Use the *navigation buttons* or a *Num label control* to search and display the transaction. This action will also enable the *Update and Delete buttons*.
2. Make relevant changes to the transaction.
3. Click the *Update button*.

❑ To delete an existing transaction, perform the following steps:

Figure 5.3 Accounts Transactions - Sales Page Window

The *Sales page window* displays the following controls and buttons:

- **Select Product:** The *Select Product frame* contains a combo textbox which enables the user to select a product from a dropdown list.
- **Sales Information:** The *Sales Information frame* contains the *Date*, *Number*, *Sales code*, *CTN*, and *STN* controls. The *Date* and the *Number* of a transaction form a unique pair for identification.
 - **Date:** The *Date* textbox comes with a *date picker control* which enables the user to select a date.
 - **Sales code:** The *Sales code* combobox enables the user to select a sales code. The sales code is a unique code.
 - **CTN:** The *CTN* textbox displays the *cost transaction number* of the sales transaction.
 - **STN:** The *STN* textbox displays the *sales transaction number* of the sales transaction.
- **Transaction Details:** The *Transaction Details frame* contains the *Description*, *Sales value*, and *Cost value* textboxes.
 - **Description:** The *Description* textbox enables the user to enter a description of the sales transaction.
 - **Sales value:** The *Sales value* textbox enables the user to enter an amount for the sales value.
 - **Cost value:** The *Cost value* textbox enables the user to enter an amount for the cost component of the sales.
- **Select Sales Transaction Other Account:** The *Select Sales Transaction Other Account frame* contains the *Secondary acc.* and *Holder acc.* textboxes corresponding to the asset and liability accounts relevant to the sales transaction.

relevant sales account in the sales transaction.

- **Secondary acc.:** The *Secondary acc. combobox* enables the user to select a sales account from the dropdown list.
- **Holder acc.:** The *Holder acc. combobox* enables the user to select a holder account from the dropdown list.
- **Navigation group:** The *navigation group of controls* consists of the *Date Search button*, the *Previous navigation button*, the *position label control*, the *Number label control*, the *Next navigation button*, and the *Last navigation button*.
 - **Date Search:** The *Date Search checkbox* enables the user to navigate to a particular date. The *Date Search* is relevant only for actions relative to the *Date Search* buttons.
 - **First Navigation Button:** The *first navigation button* enables the user to navigate to the first sales entry in the database. If the *Date Search* is checked, this navigates the user to the first sales entry on the displayed date.
 - **Previous Navigation Button:** The *previous navigation button* enables the user to navigate to the previous sales in the database relative to the displayed sales.
 - **Position label control:** The *position label control* displays the position of the current sales entry in the database.
 - **Number label control:** The *number label control* displays the total number of sales entries in the database.
 - **Next Navigation Button:** The *next navigation button* enables the user to navigate to the next sales entry in the database relative to the displayed sales.
 - **Last Navigation Button:** The *last navigation button* enables the user to navigate to the last sales entry in the database. If the *Date Search* is checked, this navigates the user to the last sales entry on the displayed date.
- **Sales Register:** The sales register shows a list of ten sales under the following columns:
 - **Num:** Shows the positions of relevant sales entries in the database. Enables the user to display the relevant sales on the screen.
 - **Date:** Shows the dates of relevant sales entries.
 - **Sales code:** Shows the sales code of the relevant sales entries.
 - **Product:** Shows the names of the products associated to the relevant sales entries.
 - **Description:** Shows the description of the relevant sales entries.
 - **Sales value:** Shows the sales amounts of the relevant sales entries.
 - **Cost value:** Shows the cost amounts of the relevant sales entries.
 - **Secondary acc.:** Shows the secondary accounts on the debit side of the sales entries.
 - **Holder acc.:** Shows the holder accounts on the debit side of the sales entries.
 - **The Scroll Bar:** The *scroll bar* enables the user to scroll through the entries in the sales register.
 - **The Bar Button:** The *bar button* enables the user to return the *scroll bar* to the first ten entries.
- **Base Command group:** The *base command group of controls* consists of the *Save button*, the *New button*, the *Submit button*, the *Update button*, and the *Delete button*.
 - **New:** The *New button* enables the *Submit button* when clicked.
 - **Submit:** The *Submit button* enables the user to save a new sales entry in the database.
 - **Update:** The *Update button* enables the user to make changes to a sales entry in the database.
 - **Delete:** The *Delete button* enables the user to delete a sales entry from the database.

the database.

❑ To create a new sales entry, perform the following steps:

1. Select the relevant product under the *Select Product frame*.
2. Click the *New* button to enable the *Submit button*. This action will also generate a *Sales code*, a *CTN number*, and an *STN number*.
3. Use the *Date field* to select the appropriate transaction date if not the current date. This action will also generate a *Sales code*, a *CTN number*, and an *STN number*.
4. Enter the description, the sales value and the cost value under the *Transaction* frame.
5. Enter the secondary account and the holder account for the debit side of the transaction under the *Select Account frame*.
6. Click the *Submit button*.

❑ To update an existing sales entry, perform the following steps:

1. Use the *navigation buttons* or a *Num label control* to search and display the sales entry. This action will also enable the *Update and Delete buttons*.
2. Make relevant changes to the sales entry.
3. Click the *Update button*.

❑ To delete an existing sales entry, perform the following steps:

1. Use the *navigation buttons* or a *Num label control* to search and display the sales entry. This action will also enable the *Update and Delete buttons*.
2. Click the *Delete button*.

❑ To access the invoice of a particular sales entry, perform the following steps:

 - **Reconciled:** The *Reconciled textbox* enables the user to indicate whether the split transaction is reconciled.
 - **Description:** The *Description textbox* which enables the user to give a description for the split transaction.
 - **Transfer Amount:** The *Transfer Amount textbox* which enables the user to enter the transfer amount of the split transaction.
- **Split Side:** The *Split Side frame* contains the *Primary acc.*, *Secondary acc.*, *Holder acc.* and *Balance* textbox.
 - **Primary acc.:** The *Primary acc. combobox* enables the user to select the primary account from a dropdown list.
 - **Secondary acc.:** The *Secondary acc. combobox* enables the user to select the secondary account from a dropdown list.
 - **Holder acc.:** The *Holder acc. combobox* enables the user to select the holder account from a dropdown list.

dropdown list.

- **Balance:** The Balance textbox displays the current balance of the selected transaction.

- **Base Navigation group:** The *base navigation group of controls* consists of the *Date Search checkbox*, the *First navigation button*, the *Previous navigation button*, the *Position label control*, the *Next navigation button*, and the *Last navigation button*.

- **Date Search:** The Date Search checkbox enables the user navigate through transactions corresponding to a particular date. The *Date Search* is relevant only if the *First navigation button* or *Last navigation buttons* are clicked.
- **First navigation button:** The *first navigation button* enables the user to view the first transaction in the database. If the *Date Search* is checked, this navigation button displays the transaction corresponding to the displayed date.
- **Previous navigation button:** The *previous navigation button* enables the user to view the previous split transaction in the database relative to the displayed transaction.
- **Position label control:** The *position label control* displays the position of the selected transaction in the list of split transactions.
- **Number label control:** The *number label control* displays the total number of split transactions.
- **Next Navigation Button:** The *next navigation button* enables the user to view the next split transaction in the database relative to the displayed transaction.
- **Last Navigation Button:** The *last navigation button* enables the user to view the last transaction in the database. If the *Date Search* is checked, this navigation button displays the transaction corresponding to the displayed date.

- **Base Command group:** The *base command group of controls* consists of the *Date Search checkbox*, the *New button*, the *Submit button*, the *Update button*, and the *Delete button*.

- **Duplicate previous:** The *Duplicate previous checkbox* enables the user to duplicate the displayed transaction based on the previously displayed one.
- **New:** The *New button* enables the *Submit button* when clicked. This button is disabled if the *Duplicate previous checkbox* is not pressed.
- **Submit:** The *Submit button* enables the user to save new transaction to the database.
- **Update:** The *Update button* enables the user to save changes made to the displayed transaction in the database.
- **Delete:** The *Delete button* enables the user to delete the displayed transaction.

- **Split Navigation group:** The *split navigation group of controls* consists of the *Previous navigation button*, *Position label control* and the *Next navigation button*.

- **Previous navigation button:** The previous navigation button enables the user to view the previous transaction in the split register relative to the displayed transaction. If the *Previous navigation button* is clicked, the first transaction in the register is displayed.
- **Position label control:** The *position label control* displays the position of the selected transaction in the split register.
- **Next navigation button:** The *next navigation button* enables the user to view the next transaction in the split register relative to the displayed transaction.

- **Split Command group:** The *split command group of controls* consists of the *New Split button*, the *Clear button*, the *Enter button*, the *Update button*, and the *Delete button*.

- **New Split:** The *New Split button* clears the split screen, updates the *Position label control* and the *Number label control* when clicked.
- **Clear:** The *Clear button* clears the split register and the split screen, and the *Position label control* and the *Number label control*, when clicked.

Delete button, when entered.

- **Enter:** The *Enter button* enables the user to enter the displayed transaction temporarily.
 - **Update:** The *Update button* enables the user to save changes made to the split register.
 - **Delete:** The *Delete button* enables the user to delete the displayed transaction.
- **Split Register:** The split register shows a list of five transactions under the following fields:
 - **TN:** Shows the positions of relevant transaction in the database. Each user can click on the TN to display the relevant transaction on the screen.
 - **Description:** Shows the description of the relevant transactions.
 - **Amount:** Shows the transfer amounts of the relevant transactions.
 - **Primary acc.:** Shows the primary accounts on the split side of the relevant transaction.
 - **Secondary acc.:** Shows the secondary accounts on the split side of the relevant transaction.
 - **Holder acc.:** Shows the holder accounts on the split side of the relevant transaction.
 - **Delete icon:** The delete icon associated with each split transaction enables the user to delete the relevant transaction from the split register.
 - **The Scroll Bar:** The *scroll bar* enables the user to scroll through the transactions in the split register.
 - **The Bar Button:** The *bar button* enables the user to return the scroll bar to the top of the first ten transactions.

❑ To create a transaction, perform the following steps:

At the base transaction level:

1. Click the *New button* to enable the *Submit button*. This action will also enable the *Date field*, generate an *ST code*, generate the *base transaction number*, and set the *Debit*.
2. Use the *Date field* to select the appropriate transaction date if not the current date. This action will generate an *ST code*, generate the *base transaction number*, and set the *Debit*.
3. Make the appropriate change to the *base option class* if necessary.
4. Make the appropriate *base side* entries.

At the split register level:

5. Click the *New Split button* to enable the *Enter button*. This action will also enable the *Description field* and set the *Reconciled field* to "n".
6. Enter the description and a required transfer amount.
7. Make the appropriate split side entries.
8. Click the *Enter button* to enter the transaction in the split register.
9. Repeat steps 5 to 8 above to enter the other relevant splits for this transaction.

At the base transaction level:

10. Click the *Submit button* to save the transaction in the database.

❑ To update a split transaction in the register, perform the following steps:

1. Use the *split navigation buttons* to search and display the relevant transaction. This action will also enable the *Update and Delete buttons*.
2. Make relevant changes to the transaction.
3. Click the *Update*.

❑ To delete a split transaction from the register, perform the following steps:

❑ To delete a split transaction from the register, perform the following steps.

1. Use the *split navigation buttons* to search and display the relevant transaction. The *split navigation buttons* will also enable the *Update and Delete buttons*.
2. Click the *Delete button*. Alternatively, you can click the *delete icon* corresponding to the transaction.

❑ To update an existing transaction in the database, perform the following steps:

1. Use the *navigation buttons* or the *ST code control* to search and display the transaction. The *navigation buttons* will also enable the *Update and Delete buttons*.
2. Make relevant changes to the transaction.
3. Click the *Update button*.

6. Reports

The *Accounts Reports page* is displayed when the *Reports control* is clicked. The page has four tabs: *Home*, *Financial Accounts*, *Account Transactions*, *Account Balances*, and

The *Accounts Transactions page window* displays the following controls and buttons:

- **Petty Cash Analysis:** The *Petty Cash Analysis frame* contains the *Date*, *Month*, *Year*, and *Run button*.
 - **Date:** The *Date textbox* comes with a date-picker control which enables the user to select a date.
 - **Month:** The *Month textbox* displays the month relative to the selected date.

- **Year:** The *Year textbox* displays the year relative to the selected date.
- **Run:** The *Run button* enables the user to run and generate a petty cash report.

- **Account Transactions Analysis:** The *Account Transactions Analysis frame* contains the *Select Account frames*.

- **Select Period:** The *Select Period frame* contains the *From* and the *To textbox*.
 - **From:** The *From textbox* comes with a date-picker control which enables the user to select the start date for the report.
 - **To:** The *To textbox* comes with date-picker control which enables the user to select the end date for the report.

- **Select Account:** The *Select Account frame* contains the *Primary Account listbox*, *Secondary Account combobox*, *Holder Account combobox*, and the *Run button*.
 - **Primary Account:** The *Primary Account listbox* enables the user to select the primary account from a dropdown list.
 - **Secondary Account:** The *Secondary Account combobox* enables the user to select the secondary account from a dropdown list.
 - **Holder Account:** The *Holder Account combobox* enables the user to select the holder account from a dropdown list.
 - **Run:** The *Run button* enables the user to run and generate an account transactions analysis report.

❑ To generate a *Petty Cash Analysis* report, perform the following steps:

1. Select the relevant date using the *Date date-picker* to obtain the required start and end dates in the *From* and *Year* textboxes respectively.
2. Click the *Run button*.

❑ To generate an *Account Transactions Analysis* report, perform the following steps:

1. Select the relevant start date using the *From date-picker*.
2. Select the relevant end date using the *To date-picker*.
3. Choose the relevant primary account using the *Primary Account listbox*.
4. Select the relevant secondary account using the *Secondary Account combobox*.

6.4 Accounts Balances

Clicking the *Accounts Balances control tab* opens the *Accounts Balances page* with the following controls:

Accounts Reports

Home	Financial Accounts	Accounts Transactions	Account Balances
Statement of Account			
Select Period			
From		To	
Select Account

Secondary account			

Figure 6.4 Accounts Balances Page Window

The Accounts Balances form window displays the following textboxes, controls and frames:

- **Statement of Account:** The *Statement of Account* frame contains the *Select Period* and *Select Account* frames.
 - **Select Period:** The *Select Period* frame contains the *From* and *To* textboxes.
 - **From:** The *From* textbox comes with a date-picker control which enables the user to select the start date of the report.
 - **To:** The *To* textbox comes with a date-picker control which enables the user to select the end date of the report.
 - **Select Account:** The *Select Account* frame contains the *Primary Account list* combobox, *Holder Account* combobox, and the *Run* button.
 - **Primary Account:** The *Primary Account* listbox enables the user to select the primary account from a dropdown list.
 - **Secondary Account:** The *Secondary Account* combobox enables the user to select the secondary account from a dropdown list.
 - **Holder Account:** The *Holder Account* combobox enables the user to select the holder account from a dropdown list.
 - **Run:** The *Run* button enables the user to run and generate a statement of account report.
- **Trial Balance:** The *Trial Balance* frame contains the *Secondary accounts option* button, *Mode* combobox, *As at...* textbox, and the *Run* button.
 - **Secondary accounts:** The *Secondary accounts option* button enables the user to select the secondary accounts for the trial balance report.
 - **Holder accounts:** The *Holder accounts option* button enables the user to select the holder accounts for the trial balance report.
 - **Mode:** The *Mode* combobox enables the user to select a periodic mode for the trial balance report.

❑ To generate a *Statement of Account* report, perform the following steps:

1. Select the relevant start date using the *From* date-picker.
2. Select the relevant end date using the *To* date-picker.
3. Choose the relevant primary account using the *Primary Account* listbox.
4. Select the relevant secondary account using the *Secondary Account* combobox.
5. Select the relevant holder account using the *Holder Account* combobox.
6. Click the *Run* button.

❑ To prepare a *Trial Balance* report, perform the following steps:

1. Select either secondary accounts using the *Secondary accounts option* button or holder accounts using the *Holder accounts option* button.

- the *Holder accounts option button*.
2. Select the relevant periodic mode using the *Mode combobox*.

6.5 Inventory Reports

Clicking the *Inventory Reports control tab* opens the *Inventory Reports page window*

Figure 6.5 Inventory Reports Page Window

The Inventory Reports form window displays the following textboxes, controls and

- **Inventory Level:** The *Inventory Level* frame contains the *Date mode* group
 - ◆ The *Date mode* group consists of the *Periodic* checkbox, and the *On* and *As at* option buttons
 - **Periodic:** When checked it hides the *On* and *As at* option buttons, displays the *From* and *To* textboxes, and enables the *Run* button. When unchecked, changes the *From* and *To* textboxes to *Date* textboxes, and hides the *Run* button.
 - **On:** The *On* option button enables the user to generate reports on a particular date.
 - **As at:** The *As at* option button enables the user to generate reports as at a particular date.
 - ◆ The *Date picker* group consists of the *Date* textbox when the *Periodic* checkbox is unchecked, the *From* and *To* textboxes when the *Periodic* checkbox is checked
 - **Date:** The *Date* textbox comes with a date-picker control which enables the user to select a date for the report when the *Periodic* checkbox is unchecked.
 - **From:** The *From* textbox comes with a date-picker control which enables the user to select a start date for the report when the *Periodic* checkbox is checked.
 - **To:** The *To* textbox comes with a date-picker control which enables the user to select an end date for the report when the *Periodic* checkbox is checked.
 - **Run:** The *Run* button enables the user to run and generate reports.

□ To generate an *inventory level* report on or as at a particular date, perform the following steps:

1. Unchecked the *Periodic checkbox*.
2. Choose either *On* or *As at*.
3. Select the relevant date by using the *Date date-picker*.
4. Click the *Run button*.

- ❑ To generate an *inventory level* report over a specified period, perform the following steps:
 1. Checked the *Periodic checkbox*.
 2. Select the relevant start date of the period by using the *From date-picker*.
 3. Select the relevant end date of the period by using the *To date-picker*.
 4. Click the *Run button*.

- **Inventory Base:** The *Inventory Base* frame contains the *Select category group* and the *Date picker group*.

- ◆ The *Select category group* consists of the *Purchases, Sales and Movements*
 - **Purchases:** The *Purchases checkbox* enables the user to generate reports.
 - **Sales:** The *Sales checkbox* enables the user to generate sales reports.
 - **Movements:** The *Movements checkbox* enables the user to generate reports of particular products.

- ◆ The *Select product group* consists of the *Select product combobox* which displays all Bauta products. The default value of the combobox is *All* - representing all products.
 - **Select product:** The *Select product combobox* enables the user to select a specific inventory reports.

- ◆ The *Date mode group* consists of the *Periodic checkbox*, and the *On or As at*
 - **Periodic:** When checked it hides the *On* and *As at* option buttons, displays the *From textbox*, and displays the *To textbox*. When unchecked, changes the *From textbox* to a *Date textbox*, and hides the *To textbox*.
 - **On:** The *On option button* enables the user to generate reports as at a specific date.
 - **As at:** The *As at option button* enables the user to generate reports as at a specific date.

- ◆ The *Date group* consists of the *Date textbox* when the *Periodic checkbox* is unchecked, and the *From textbox* and the *To textbox* when the *Periodic checkbox* is checked.
 - **Date:** The *Date textbox* comes with a date-picker control which enables the user to select a date of the report when the *Periodic checkbox* is unchecked.
 - **From:** The *From textbox* comes with a date-picker control which enables the user to select a start date of the report when the *Periodic checkbox* is checked.
 - **To:** The *To textbox* comes with a date-picker control which enables the user to select an end date of the report when the *Periodic checkbox* is checked.
 - **Run:** The *Run button* enables the user to run and generate a report.

- ❑ To generate an inventory report, perform the following steps:
 1. Select the relevant inventory base category: *Purchases, Sales or Movements*.
 2. Select the relevant product.
 3. Select the relevant start date of the period by using the *Date date-picker* when the *Periodic checkbox* is unchecked; or the *From date-picker* when the *Periodic checkbox* is checked.

7. Dashboard

The Dashboard is displayed by clicking the *View Dashboard* control of the *SNM* can also be accessed by clicking and selecting the *Dashboard* worksheet tab.

7.1 Changing Dashboard Chart Type

The SNM Dashboard is displayed as either a line chart with markers or a stacked column chart. By default the Dashboard is displayed as a line chart with markers.

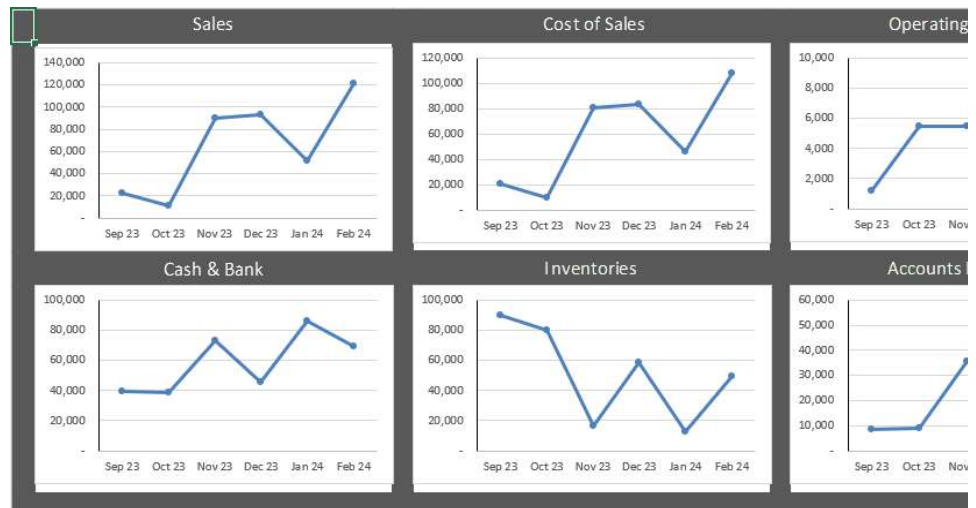

Figure 7.1 Dashboard Page - Line Charts

To change the chart type to stacked column, click the *Column* control of the *SNM*

Figure 7.2 Dashboard Page - Column Charts

To change the chart type back to line with markers, click the *Line* control of the *SNM*

7.2 Refreshing the Dashboard

On the dashboard the chart of each relevant line item is displayed monthly over

current month or the previous month.

By default the time period ends on the previous month relative to the current month.

To change to the current month, under the *SNM Dashboard* group on the ribbon:

- i. Click the *Previous month checkbox icon* to uncheck it
- ii. Click the *Refresh icon* to reset the dashboard timelines

To change back to the default state, the previous month, perform the following:

- i. Click the *Previous month checkbox icon* to check it

7.3 Getting Detailed Analytics

Each chart title header on the Dashboard page is equipped with procedures with corresponding detailed chart object.

For example, clicking the Net Profit title header on the Dashboard page opens the

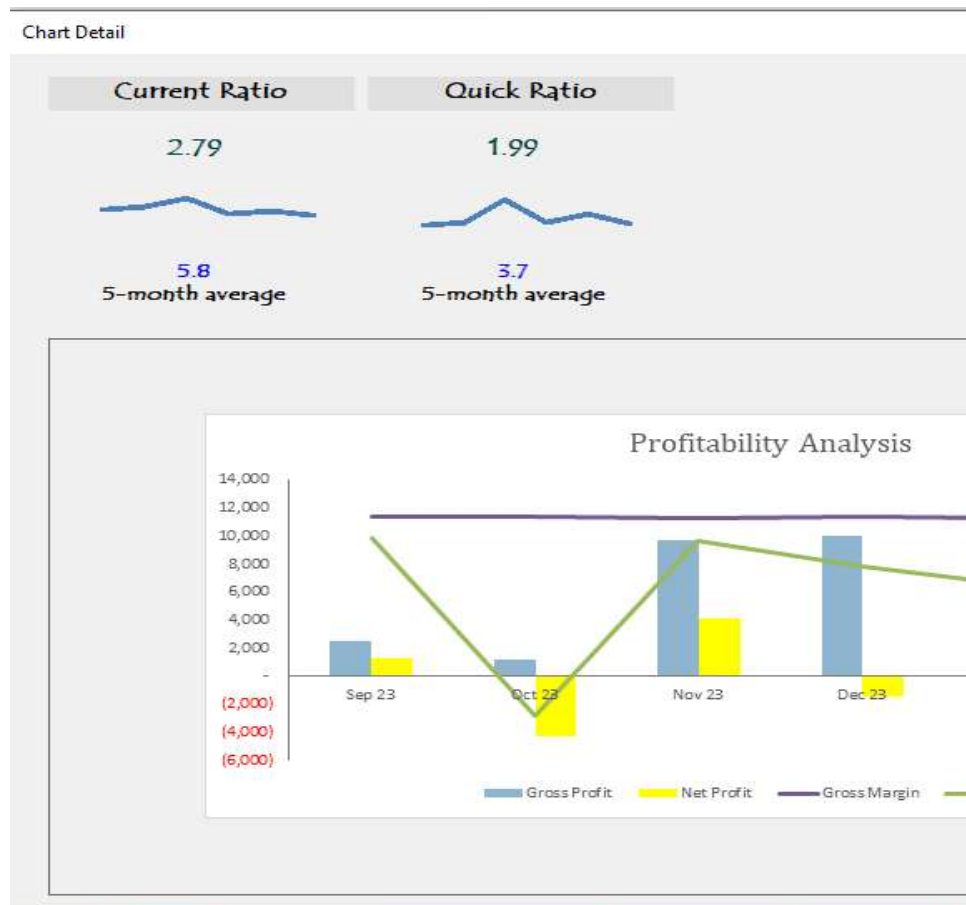

Figure 7.3 Dashboard Chart Detail Form for Profitability Analysis

- The *Current Ratio* (or *Quick Ratio*) chart object shows a six-month trend line

representing the last month value and a below number representing the previous month.

- *The Receivable to Sales* chart object shows a stacked doughnut chart which (outer slice) with previous month value (ref. inner slice) relative to the last month.

The screenshot shows a software window with a light gray background. At the top, there is a dark blue header bar. Below the header, on the left, are several input fields and dropdown menus. To the right of these is a 'Date search' section containing a checkbox, a date range selector (showing 'of 21'), and four buttons: 'New', 'Update', 'Submit', and 'Delete'. Below the buttons is a table with three columns: 'Cost value', 'Secondary acc.', and 'Holder acc.'. The table has multiple rows and a vertical scrollbar on the right.

The screenshot shows a software interface with a 'Delete' button at the top right. Below it is a table with three columns: 'acc.', 'Holder acc.', and 'Balance'. The table has five rows. Each row in the 'Balance' column contains a small 'x' icon. To the right of the 'Balance' column, there are five small arrows pointing up and down, indicating a scrollable list.
